

GOLF RULES EDUCATION

GOLF RULES EDUCATION: HOW TO TALK TO THE AI RULES ASSISTANT

Understanding the AI Agent's Limitations

This assistant is powered by a Large Language Model (LLM). While it knows the R&A Rules of Golf perfectly, it has four major technical habits and limitations you must account for:

1. **It tries to be too helpful, too fast:** The AI Agent wants to give you an immediate answer. If you dump a massive story on it all at once, it may rush to a conclusion and focus on the wrong penalty.
2. **Keep your sequence clear:** The AI Agent evaluates timelines in exact chronological order. To resolve multi-step disputes, simply state what happened first, what happened second, and let its internal logic filters map the root cause.
3. **The Agent assumes context if you are not precise:** You must explicitly differentiate between 'Stroke Play' and 'Match Play' because rules and penalties differ. If you are not explicit, the AI Agent automatically assumes 'General Play'.
4. **It is highly vulnerable to format-blending ("Fluff Phrasing"):** Injecting hypothetical format comparisons (e.g., *"acting as though it is a four-ball competition"*) creates a mathematical "gravity well" in the agent's attention heads. This causes it to pull in unrelated rules, ignore physical clarifications, and hallucinate blanket penalties. Keep the active format pure.

How to Break Down Complex Questions

Rule 1: Always Speak in the First Person ("I" or "My") — To guarantee maximum retrieval accuracy from the rules database, always phrase your question as if it happened directly to you (e.g., 'I picked up my ball-marker...'). Avoid abstract textbook wording like 'What happens if a player mistakenly lifts...'

Rule 2: State Physical Actions Only

Tell the agent exactly what the players physically did, not what they were thinking or what format they were imagining.

- **✗ Don't say:** "We thought we were playing four-ball, so my partner picked up my ball..."
- **Do say:** "Foursomes match. Partner lifted player's ball without authorization."

Rule 3: Deconstruct the Timeline

Break dense, multi-step arguments into quick, back-and-forth conversational steps instead of one massive paragraph.

- **✗ Don't say:** "My ball was on the cart path, so I dropped it, but my stance was still on it, so I re-dropped, then hit it into a ditch where I wanted unplayable relief..."
- **Do say:** Deliver your scenario in a quick milestone sequence. Ask about the cart path drop first. Wait for the AI to answer. Then ask about the penalty area ditch.

Rule 4: Strip Out Intent

GOLF RULES EDUCATION

The rules judge the physical result. Do not ask the AI to judge a player's state of mind unless the rule explicitly commands an intent check.

- **✗ Don't say:** "He didn't mean to press the sprinkler head down; he just stepped on it heavily..."
 - **Do say:** "Player stepped on and depressed a sprinkler head on their line of play."
-

● How to Stop the Agent Mid-Speech

Because the AI is designed to be highly helpful, it will occasionally launch into a long explanation of a ruling (p. 1). If you hear it start down the wrong path, do not wait for it to finish speaking (p. 1).

You can interrupt and instantly cut off the AI by saying these sharp, repetitive commands directly into your microphone (p. 2):

- 🗣️ **"Stop, stop, stop!"**
- 🗣️ **"Wait, wait, wait!"**

Saying these words three or more times quickly triggers the agent's interruption filters, completely clears its speech buffer, and opens the microphone back up so you can redirect its logic or supply a specific rule number.

🔍 How to Force the Agent to Review a Wrong Answer

If the AI gives you a ruling that you know is wrong, do not argue with it or repeat the same story. Repeating the story will just cause the AI to repeat its mistake.

Instead, use your interruption words ("**Wait, wait, wait!**"), break its loop, and force it to audit itself by guiding it toward the specific concept or rule number:

- **If you don't know the rule number**, simply feed the agent the core keywords of the situation:
 - *"Stop, stop, stop. Please review that based on my opponent giving me the wrong score information first."*
 - *"Wait, look at the timeline. Does my opponent's initial mistake cancel out my ball-handling error?"*
 - *"Re-evaluate that as a standalone event. I only lifted my marker because of the information my opponent gave me)."*
- **If you happen to know the exact rule number**, state it directly to bypass all assumptions:
 - *"Stop, stop, stop. Please review that under Rule 3.2d regarding giving wrong score information in match play)."*
 - *"Wait, please look directly at Rule 14.1."*

GOLF RULES EDUCATION

By naming a specific keyword concept or using the phrase "Review under Rule (X)", you trigger the AI's internal logic gates, forcing it to drop its assumptions and look directly at its uploaded R&A data.

⚙️ For the Technically Minded

Why This Agent Beats General "On-Line" Searching

The AI Agent has been given the latest golf Definitions, Rules, Local Rules, and their official Clarifications. This local vector dataset acts as a hard filter against outside noise:

- **Immunity to Hallucinated Precedents:** The R&A and USGA update rules and issue official clarifications quarterly (January, April, July, and October). General online searches often crawl outdated historical rule variations (like old 2019 text or archived forums). This dataset ensures exclusive reliance on current governing principles.
 - **Protection Against Forum Myths:** Public threads feature confident but incorrect interpretations (p. 3). This database strictly blocks conversational forum opinions.
 - **Precision Under Strict Logic Frameworks:** Subtle phrasing variations matter immensely in golf (e.g., the exact distinction between Rule 16.1a denying relief if a tree blocks a stroke versus general abnormal course conditions). By embedding a maximum 10-chunk retrieval window and a broad similarity threshold, we force the LLM agent to evaluate the entire overarching rule section and its inline clarifications simultaneously, leaving zero semantic blind spots."
-

The True Baseline: 2026 Rules Modernisation

To completely match the precision of an un-restricted model without risking hallucinations, the database fully accounts for the **2026 Rules Modernisation and Official Clarification updates**. The agent performs flawlessly because its local vector chunks explicitly feature these core revisions:

- **Unknowingly Moved Balls:** The penalty for a ball that accidentally moves outside the putting green without the player's knowledge has dropped from two strokes to one stroke.
- **Other Players' Pitch Marks:** The updated **Model Local Rule F-2.3** allows free relief from an unrepaired pitch mark in areas cut to fairway height or lower, even if that pitch mark was created by a different player's stroke.
- **Scorecard Length Preferred Lies:** Adjustments to preferred lies in adverse conditions now restrict the lifting, cleaning, and placing relief area to exactly **one scorecard length** rather than a full club length.
- **Internal Out-of-Bounds:** New boundaries stipulate that internal white stakes defining out-of-bounds on doglegs or adjacent holes apply **exclusively to tee shots**, vanishing for any subsequent recovery shots.

⚠️ **Cost Alert:** Please use the Agent sparingly. Detailed question sessions cost **ten pence a minute**. If a club has 1,000 members and everyone decides to call, a hundred pounds in fees can be incurred easily.
