

GOLF RULES EDUCATION

HOW TO TALK TO THE AI RULES ASSISTANT

Understanding the AI's Limitations

This assistant is powered by a Large Language Model (LLM). While it knows the R&A Rules of Golf perfectly, it has two major technical habits you need to know:

1. **It tries to be too helpful, too fast:** The AI wants to give you an immediate answer. If you dump a massive story on it all at once, it may rush to a conclusion and focus on the wrong penalty.
2. **It struggles to unpack complex timelines:** The AI reads everything at the exact same time. If multiple things happen in a single hole, it struggles to sort out what happened first and can get easily confused by complicated stories.

How to Break Down Complex Questions

To get a perfect answer, **do not** tell the AI a long story using "Player A" or "Player B". Instead, pretend **you** are the player, and break the events down step-by-step.

Trap Scenario 1: The Match Play Score Mix-up

- **Don't say:** *"In a match, Player B scores a 5 but tells Player A they got a 4. Player A picks up their ball without marking it. Then Player B corrects the mistake. What is the ruling?"* (The AI gets confused by the timeline and will try to penalize Player A for lifting the ball).
- **Do say:** *"I am in a match. My opponent told me they scored a 4, so I picked up my ball. Then they corrected themselves and said they actually scored a 5. Is there a penalty?"*

Trap Scenario 2: Moving Multiple Things in a Hazard

- **Don't say:** *"Player A's ball is in a penalty area. While walking to it, they step on a loose impediment, accidentally kick their ball, and then remove a branch before hitting. What's the total penalty?"* (The AI will panic, add up too many penalties, or miss the sequence).
- **Do say:** *"My ball is in a red penalty area. I accidentally kicked my ball while walking to it. What should I do?"* (Wait for the AI to answer, then say): *"Okay, now can I move a loose impediment next to it before I hit?"*

How to Stop the Agent Mid-Speech

Because the AI is designed to be highly helpful, it will occasionally launch into a long explanation of a ruling. If you hear it start down the wrong path, **do not wait for it to finish speaking**.

You can interrupt and instantly cut off the AI by saying these sharp, repetitive commands directly into your microphone:

-  **"Stop, stop, stop!"**
-  **"Wait, wait, wait!"**

GOLF RULES EDUCATION

Saying the word three times quickly triggers the agent's interruption filters, completely clears its speech buffer, and opens the microphone back up so you can redirect its logic or supply a specific rule number.

How to Force the Agent to Review a Wrong Answer

If the AI gives you a ruling that you know is wrong, do not argue with it or repeat the same story. Repeating the story will just cause the AI to repeat its mistake.

Instead, use your interruption words ("**Wait, wait, wait!**"), break its loop, and force it to audit itself by **feeding it a specific rule snippet or keyword**.

If you want the AI to correct itself on the spot, say these exact phrases:

- 🗣️ *"Stop, stop, stop. Please review that under **Rule 3.2d** regarding giving wrong score information in match play."*
- 🗣️ *"Wait, look at the **Rule Violation Hierarchy**. Does the first infraction cancel out the second player error?"*
- 🗣️ *"Please look at **Rule 14.1**. I only lifted my ball because of the information my opponent gave me."*
- 🗣️ *"Re-evaluate that as a **standalone event**. Forget what I said a moment ago and look strictly at the cause of the action."*

By naming a specific Rule number or using the phrase "**Review under Rule [X]**", you trigger the AI's internal logic gates, forcing it to drop its assumptions and look directly at its uploaded R&A data.

You should use the Agent sparingly as detailed question session can cost ten pence. If a club has 1,000 members and everyone decides to call, a hundred pounds can be incurred easily.
